# THE XMAMS SOLUTION

---

- ◆ Generate optimized MAMs allowances within CDMD-OA
  - Use existing provisioning process and configuration data
- ◆ All MAMs will be assigned an X-RIC for configuration management
- ◆ MAMs allowances on any given ASI will reflect the actual total onboard allowance

# THE BENEFITS

---

- ◆ Uses existing ASI processing to adjust shipboard records
- ◆ Compatible with all versions of SNAP
- ◆ Inventory using existing SNAP reports
  - Contains additional descriptive information
  - More flexible sort methods for obtaining validation sheets (several sort orders available)

# THE BENEFITS

---

- ◆ MAMs adds and deletes accurately reflected in ships files (ALL the time)
- ◆ Negative quantity indicator considered in computing total ships allowance
- ◆ Unlimited number of MAMs locations
- ◆ Additional description information such as parent APL which drove the allowance

Timely and accurate MAMs information afloat.
